>> Concrete Dosing Systems

Flexible Solutions

Dosing systems can be either designed for the wet cast process or for dry cast or semi dry cast, applications. They can be either a stand alone system, or part of a complete filling and handling system, to be used either with your own moulds or moulds custom designed by Coote Engineering Ltd.

Coote Engineering Ltd. have been designing and manufacturing moulds and machinery for the Precast Concrete Industry since 1977. With this wealth of experience Coote can offer its customers the optimum solutions for their precast manufacturing requirements.

Coote Engineering utilise CAD design coupled with CNC manufacturing facilities to ensure that our products, whether from a standard range or custom design, are always manufactured to the highest of standards.

Wetcast Dosing System

System Flexibility

Single or Twin screw dosing systems can be supplied with a simple vibrating table or with feed on and off lines. These systems can be manually operated or have a pre-set dose by time or by weight. Both of these systems give an accurate repeatable and predictable mould fill for better quality products, combined with the flexibility to change from one product to another very quickly.

Systems can also be provided which measure the dose by volume. These are most suitable where long runs of the same product are required.

Professional Service

As a world leading design and manufacturing company, it is our aim to provide you, our customer, with the correct product choice and best possible solutions to meet your specific needs. We couple this with a commitment to provide ongoing spares and technical backup. This gives you our customer, the comfort of knowing that in choosing Coote Engineering Ltd. as your partner you have made the correct choice.

- All our equipment carries the CE mark, where applicable.
- Should you require any information on a dosing system or the Coote product range, our experienced technical staff will be pleased to help you.
