

Pallet Handlers

Flexible Solutions

The Pallet Handler is a very flexible and efficient machine for the handling of concrete mouldage, pallets and cured products. It can be used in conjunction with various Coote feed systems or as a stand alone unit.

The Pallet Handler has the ability to lift both moulds and pallets while rotating through 180° to demould or strip product. The Handler can also move moulds on, and remove them from, the vibrating unit. Pallet handlers are operated by a single person or can be automated.

Handler Type

Pallet handlers can be either floor or overhead types. Floor types run on floor mounted base rails and overhead types run on gantry crane rails. Either can be fitted with a range of customised attachments to suit your product. These attachments can be of a grab type or a vacuum type and are often specifically designed for the application in hand.

Floor type

- Standard 4m mould length, 2.5m lift height
- Specials 5m and 6m mould widths
3m and 3.5m lift heights
- Standard 4 Tonne load capacity
- Specials 6 and 8 Tonne load capacity

Overhead type

- Within reason, height and length restrictions do not apply.
- Loads can be specified.

Bespoke

If you have a specific requirement to handle large moulds or product please contact us and we will be happy to look at your individual needs.

Specification subject to change without prior notification.
